

'Why Spectrum' Video Transcript (English)

For several years, many Canadians have looked to medical cannabis to help them with a variety of health issues.

If you're considering it, here's some information to help you get started.

The two main active ingredients in cannabis are THC and CBD.

THC is responsible for the euphoric or psychoactive effects of cannabis.

CBD does not cause the psychoactive euphoric effects that THC does. In fact, it can help reduce these effects.

Depending on your needs, your healthcare professional may recommend a product containing THC, CBD, or a mixture of both.

And that's where the Spectrum comes in. The Spectrum Framework is a simple colour-coding system based on THC and CBD content.

It shows you which products contain mostly THC, which are CBD dominant, and which have a mixture of the two.

Within each colour of the Spectrum, you can choose from a range of products and strengths.

Speak to your healthcare professional to learn more about medical cannabis and discuss what's right for you.
